

### **ME528 Project Presentation Marking Scheme**

1. General presentational style including keeping to time 2
2. Use of PowerPoint 2
3. Care in the use of mathematical notation 1
4. Quality of Solution to Part 1 2
5. Quality of Solution to Part 2 2
6. Competence at answering question 1

#### **Notes:**

1. The PowerPoint presentations should make good use of the screen, balancing density of information against clarity. The project should be summarised in full, according to the remits for the two parts that you have been working to. So, there should be around 10 slides which are properly and completely used, terminating in a conclusions page.
2. The PowerPoint slides should be attractively formatted, and although a plain background is always good there should also be some attempt to individualise the format. The font should be clear and the mathematical notation must be correct. The presentation must have a title page and that should include your name and registration number (this is not necessarily included as one of the 10 slides used to explain the work done). Remember that you have 5 minutes to present your work, no more.

The assessment will be to 0.1 accuracy, so, for example, a mark of 7.3/10 will be the mark carried forward.
